**IndoStays** is an app for finding a place to stay in Indonesia. Hotel, Villa, Apartment, homestay many choices for you. Almost like Traveloka or Airbnb, but we only focus on staying in a place, so it's simpler and clearer. You choose the room you like, then you book and you enjoy your rest. Very easy and comfortable for users.

## Welcome Page

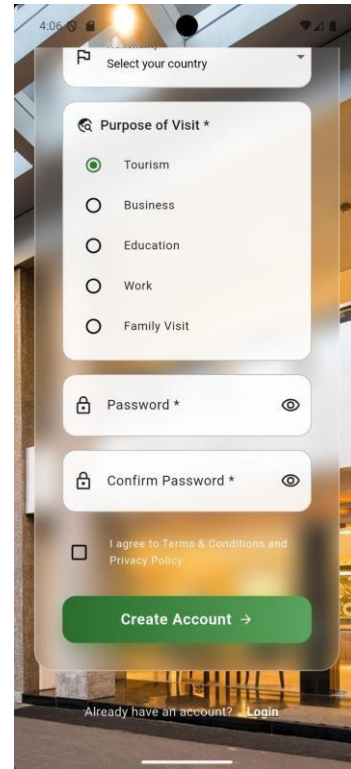

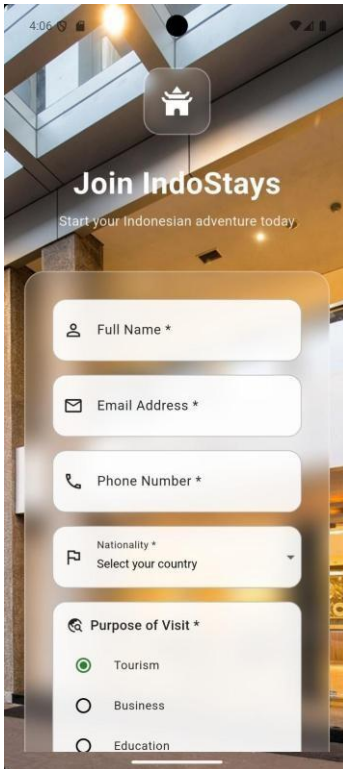

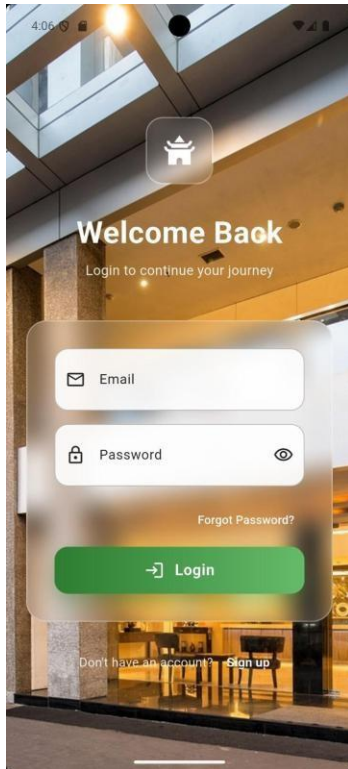

This is the first page you see. We want to greet users with a warm and friendly message.

## Home Page

Show what makes IndoStays special. You can stay in real local places, like Indonesian traditional house or modern villa, many options for you. And below, there is a navigation bar, so you can move to Home, Explore, Wishlist, Messages, and Profile very quickly and easily.

## Profile Landing Page

This page appears when the user taps the Profile icon but is not logged in yet. It welcomes users and gives 3 choices (Login, Create Account, Continue as Guest).

## Welcome Back Page

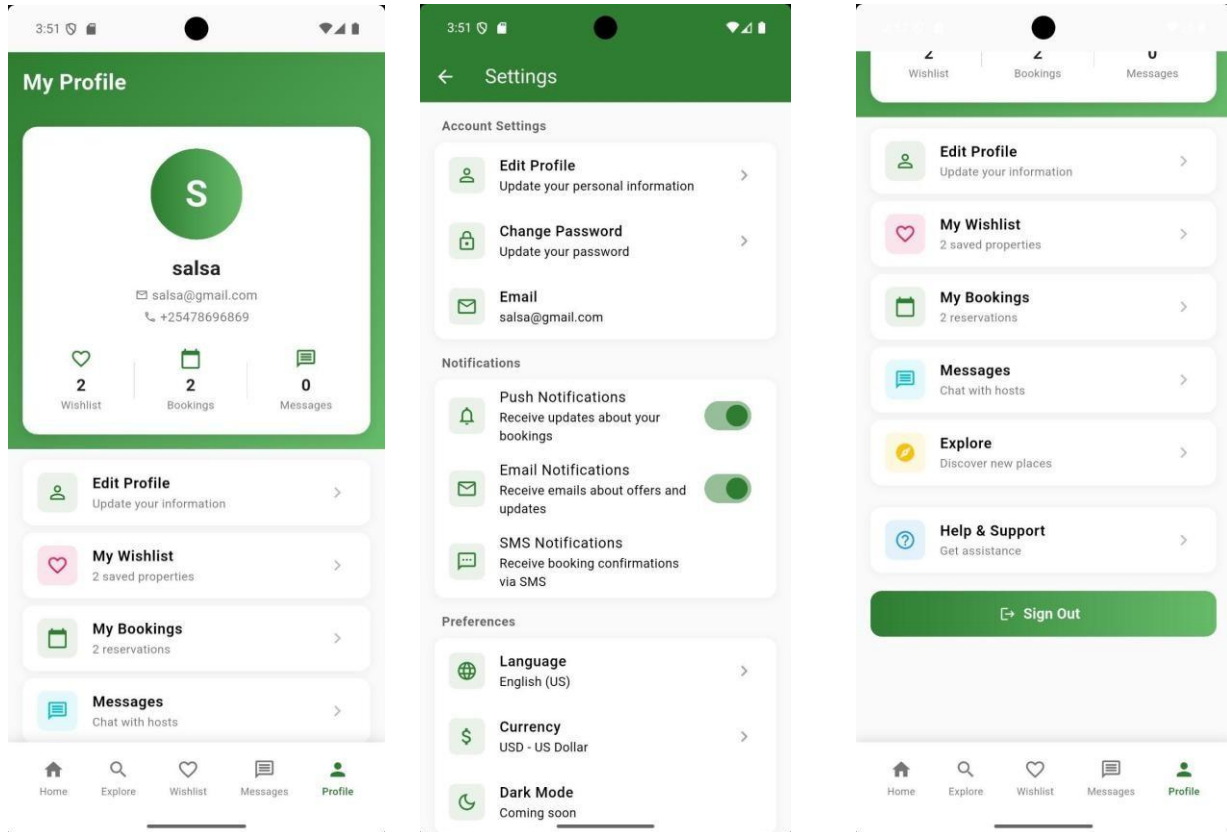

Login screen where users have to sign in before using the app. It has two input fields (Email and Passwords) + Forgot Password link if the user needs help recovering their account. Once the user enters their info, they tap the big green Login button to continue their journey into the app.

## Join IndoStays

This page is the registration form. Users must fill in their Full Name, Email, Phone Number, Nationality and choose the Purpose of Visit.

## Create Account

This is the continuation of the registration screen. Users must create a password, confirm it and agree to the Terms & Conditions before tapping Create Account.

## My Profile page

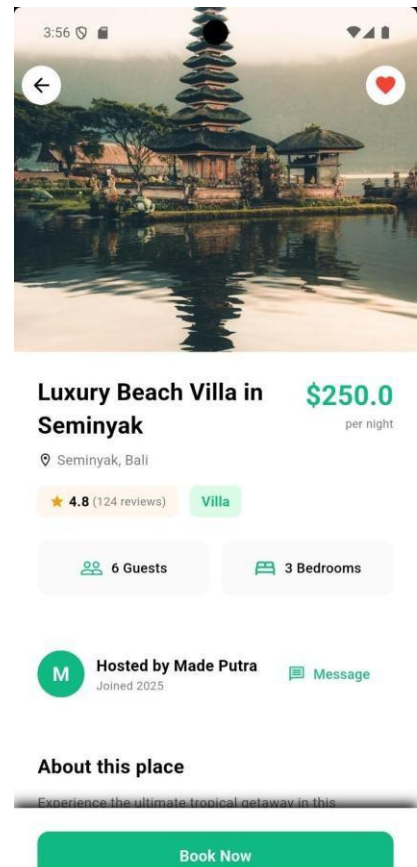

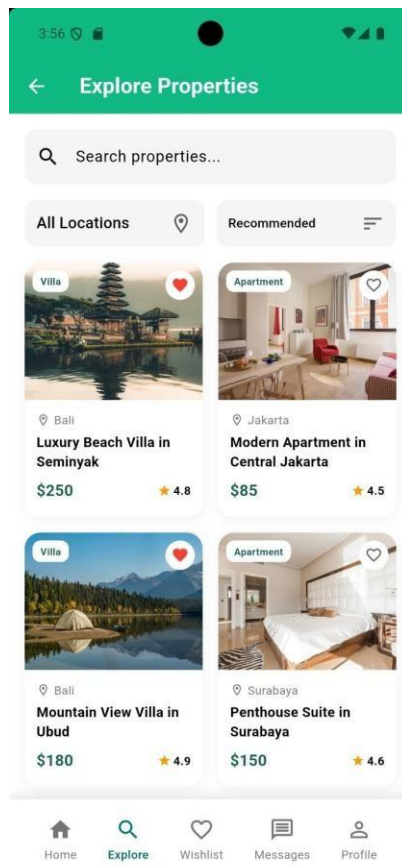

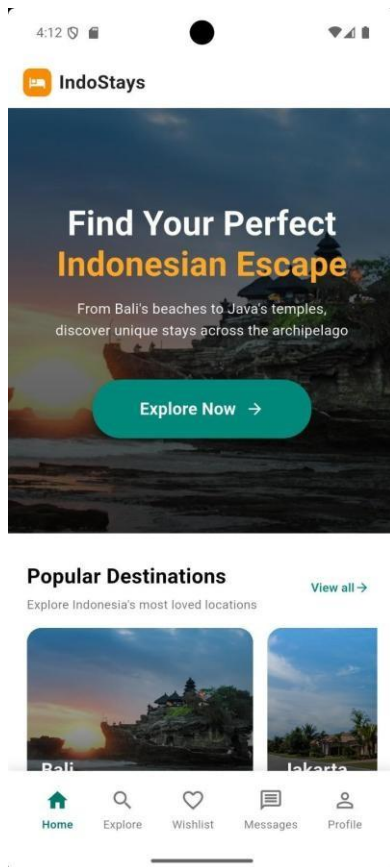

Show User Profile. They can see photo, name, email and phone number, all in one place. There is also some small info like how many wishlist they save, how many bookings they make, and message they have.

## Settings

Here users can message their account and the app in simple way. This page help users make the app feel more comfortable for them.

## Profile Sign Out

At the bottom, there is Sign Out button if users want to logout. So this page is like the main account area, where everything about user is easy to check.

## Home

The first page when user login the app. There is a large banner with a button called “Explore Now” to start searching for places to stay. Below, user can see “Popular Destination”.

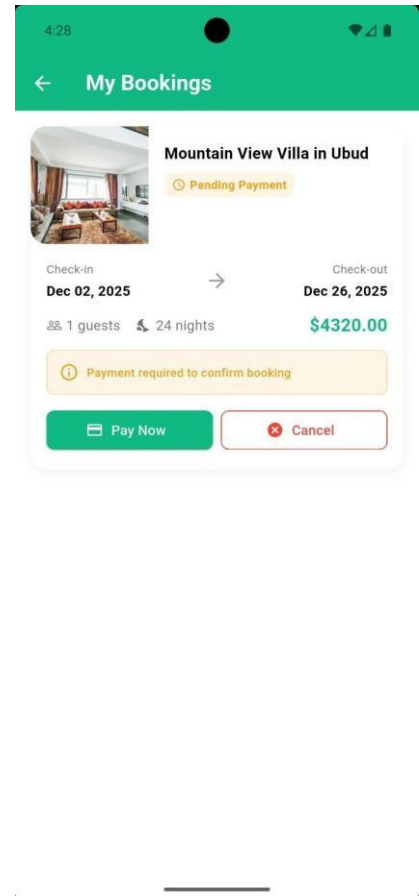

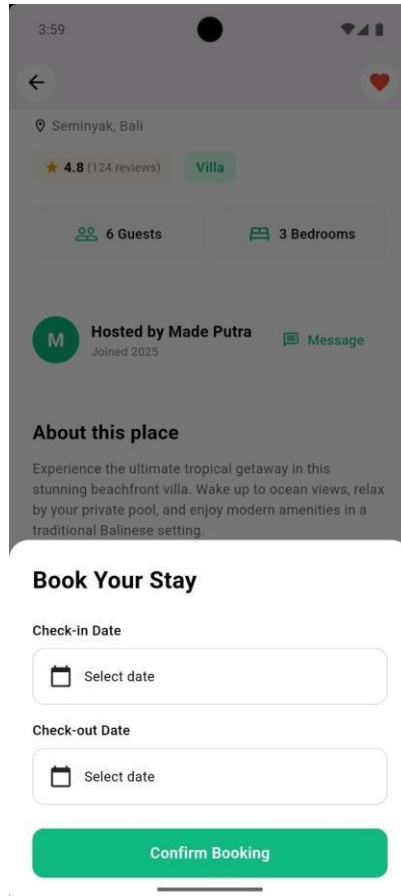

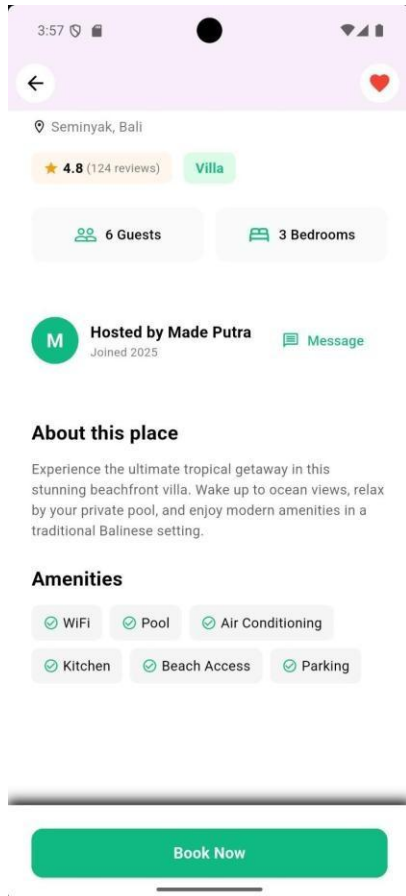

## Explore Properties

Users can explore many available properties such as villas, apartments, and suites. There’s a search at the top so users can type the location or property name.

## Property Detail Page

Show detailed information about one specific property. Users can see the main photo, price/night, location, and property type. There is a section showing the host’s name and when they joined. Users can scroll down to read the full description of the place. At the bottom, there’s a Book Now button so users can directly make a reservation.

## Detail Page

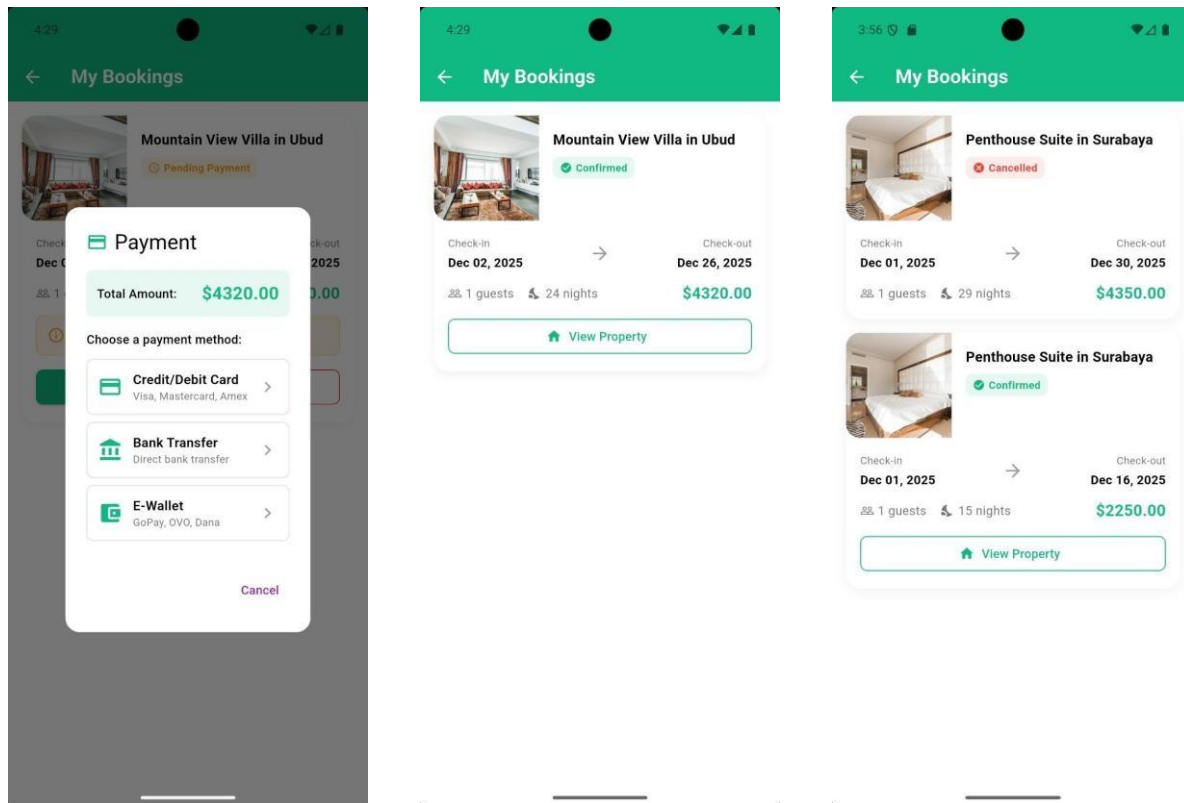

Detail of the place (description), show information what are they providing, location, ratings, tell the user about the how much guest are in that room, how many beds. They can immediately contact the hosted.

## Book Date

User need to feel their check in Date and Check out date. Right after they fill, they can confirm.

## My Bookings

User booking place will appear to this page. They will see the Booking Status and how much they need to pay the cost.

## Payment

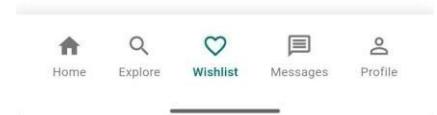

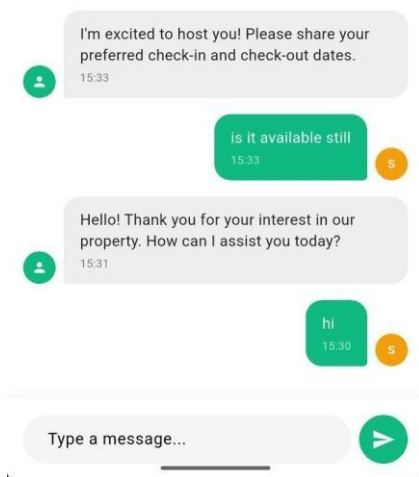

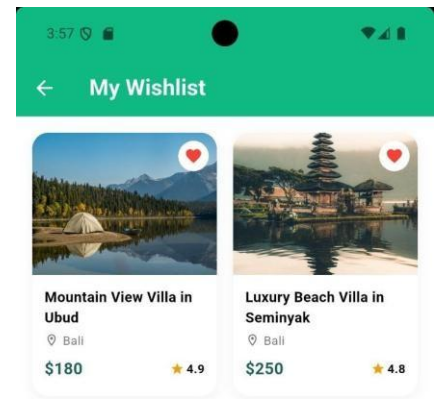

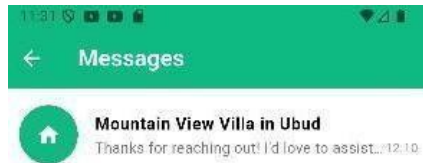

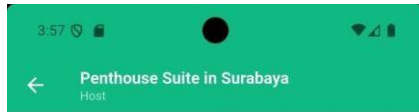

This page will show the payment method the user can choose. And the total amount users need to pay.

## My bookings

If the payment is successful, the status booking will change to confirmed.

## Canceled Bookings

If the payment / transaction doesn't work well, the status of booking will show canceled with a red bar. A "View Property" button is not available.

## Chat Host

Users are available to contact the host for more detail information.

## Messages

This page will show message from other host and user account. There is an automated Ai service to give response on behalf of the hosts when users want to inquire about the property.

## Wishlist

This page shows all the place the user has saved or "hearted". Basically, it's a list of favorite stays they're interested in. Users can quickly tap on any card to view more details about the villa or hotel.
